

Genuine book building thermal bridge multi-dimensional heat transfer model and simulation of high rock(Chinese Edition)

Filesize: 7.11 MB

Reviews

Simply no phrases to spell out. It is probably the most remarkable pdf i have got read through. I am delighted to inform you that this is actually the greatest publication i have got read within my very own existence and can be he very best book for actually.
(Demarcus Ullrich)

GENUINE BOOK BUILDING THERMAL BRIDGE MULTI-DIMENSIONAL HEAT TRANSFER MODEL AND SIMULATION OF HIGH ROCK(CHINESE EDITION)

To get **Genuine book building thermal bridge multi-dimensional heat transfer model and simulation of high rock(Chinese Edition)** eBook, make sure you refer to the button listed below and save the document or have access to additional information which might be in conjunction with GENUINE BOOK BUILDING THERMAL BRIDGE MULTI-DIMENSIONAL HEAT TRANSFER MODEL AND SIMULATION OF HIGH ROCK(CHINESE EDITION) ebook.

paperback. Condition: New. Ship out in 2 business day, And Fast shipping, Free Tracking number will be provided after the shipment. Paperback. Pub Date :2012-07-01 Pages: 125 Publisher: China Building Industry Press Information title: building thermal bridge multi-dimensional heat transfer model and simulation of the original price: 22.00 yuan: Rock Publisher: China Building Industry Press date :2012-07-01 ISBN: 9787112141319 Words: Pages: 125 Edition: 1 Binding: Folio: 32 Weight: Editor's Summary In today's society, energy, human social and economic development can be a source of progress and power, while building energy efficiency is an important area of energy conservation. Attaches great importance to building energy conservation efforts by the Governments. Get more and more development work carried out building energy efficiency, low energy building regulations and technical specifications. Low energy building more and more building insulation with low thermal conductivity material, in order to meet the requirements of energy consumption and environmental aspects. Meanwhile, the development of modern building technology brings more sophisticated internal and external structure, construction at the same time need to apply a lot of building materials having high thermal conductivity characteristics in order to meet the structural considerations. Non-continuous or geometric conditions of the change in the thermal characteristics of building materials has obvious characteristics of multi-dimensional heat conduction thermal bridge phenomenon is extremely common in modern architecture, and occupy an important proportion of the whole building energy consumption. However, the existing building dynamic thermal simulation software, in order to simplify the simulation, the building envelope heat transfer problem is the use of one-dimensional thermal model instead of the actual three-dimensional heat transfer, thus ignoring the thermal bridge the impact, even taking into account the impact of thermal bridges is basically be amended from a static point of view. Multi-dimensional heat transfer model and simulation in order to seek...
