THERMISTOR

Betascript Publishers Dez 2009, 2009. Taschenbuch. Book Condition: Neu. 220x150x7 mm. Neuware - Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online. A thermistor is a type of resistor whose resistance varies with temperature. The word is a portmanteau of thermal and resistor. Thermistors are widely used as inrush current limiters, temperature sensors, self-resetting overcurrent protectors, and self-regulating heating elements. Thermistors differ from resistance temperature detectors (RTD) in that the material used in a thermistor is generally a ceramic or polymer, while RTDs use pure metals. The temperature response is also different; RTDs are useful over larger temperature ranges, while thermistors typically achieve a higher precision within a limited temperature range [usually -90C to 130C]. 116 pp. English.
