According to statistics, China's annual output of MSW up to more than 170 million tons, and the annual increase rate of about 10%. China's urban garbage treatment rate is not high, the real lower proportion of harmless disposal and resource utilization, the growing garbage troubled economic development and environmental governance has become a major problem. Municipal solid waste composition of garbage generated by urban residents garbage, commercial waste, municipal maintenance and management. The basic characteristics of MSW is low calorific value and high water content, complex composition and seasonal changes. With the change in the lifestyle of the urban residents, garbage, while growth in total ingredient also change a lot. Continued to drop the content of inorganic matter in the garbage, organics increasing increased, combustible, recyclable matter increased use value increases. Large MSW generated, not only serious environmental pollution and destruction of resources, and produce significant source of infectious diseases that endanger the health of people. In recent years, state and local governments at all levels have attached great importance to the processing of municipal solid waste, invested a lot of money for scientific research and construction of waste disposal facilities, to take sanitary landfill, high temperature composting, incineration, resource processing various forms waste disposal, from 2% in...
