Excerpt: .be connected to the negative field terminal. Open the switch after the fields have been excited for a time, and note the kick of the voltmeter needle. This induced e. m. f. is due, as previously explained, to the self-induction of the field circuit. The flux of the magnetic field in shrinking to zero cuts the turns of wire composing the field coil and generates in these interlinked wires an electro-motive force, depending for its magnitude upon the time taken for the flux to reach zero and upon the magnitude of the flux. Li V ) Fig. 220.--To show Induction of Field Winding. Armature Circuit.--As the armature has a low resistance, it is obviously unwise to connect it directly to a circuit of 116-volt source as in the case of the field circuit without using an external resistance in series with it. Experiment 91. Having connected the field circuit to the source of supply, open the main switch and connect the armature lla voLTa in parallel with it, through a suitable resistance, with an f dx. ammeter also in circuit. If the machine is a small unit, n r such as a 2-kilowatt machine, a bank of lamps forms r--Jj--a suitable adjustable resistance. Sufficient lamps should be turned on with the main switch closed, Fig. 221, until the motor starts to operate. If the Wj hand be placed upon the pulley of the motor so that Sr Lqj l it cannot rotate, the ammeter...
