Brand New Book. Excerpt from Animal Welfare Information Center Newsletter, Vol. 5: Fall 1994 Our research began with acoustical analyses of rhesus vocalizations recorded over several years from a large colony of free-ranging animals (11 in naturally occurring social groups. From these data, we established the vocal repertoire and associated behavior of the rhesus under natural conditions which serves as the normative base needed to interpret vocal behavior recorded under captive conditions. We then obtained vocal and video records of rhesus maintained in a variety of captive environments: out door vs. In-door, single-caged vs. Social groups, research subjects vs. Breeding stock, etc. Although our research is far from complete, the data already indicate that this approach will become fruitful. Vocal patterns do appear to vary with housing and treatment conditions. The expression of emotion is there in the calls, in captivity as it is in the field. The difference is that, in captivity, an emotional state may be induced by human-imposed conditions, which may or may not be desirable. At least we now have a way of examining the question. Animal vocalizations appear to express pretty much the same things under captive and natural conditions. To the extent that this is true, vocal records provide an objective, real-time basis for monitoring emotional variation in captive animals. Effects of environmental enrichments, new caretaking procedures, more humane research protocols, etc., can be evaluated in terms of emotional impact as expressed in the vocal record. It seems that animals can tell us how they feel if we learn to listen and understand. About the Publisher Forgotten Books publishes hundreds...
