Reviews

Here is the finest publication we have read right up until now. It is actually written in easy words instead of difficult to understand. Its been written in a remarkably easy way in fact it is only right after i finished reading this book in which basically changed me, modify the way i really believe.

Obviously, a vertical pipe discharging downward is a special case if such coincidence. Second.--If the water (Fig. 13), in its passage from the greater to the smaller pipe, passes through an opening in a thin diaphragm, Fig. 13. as in the case of a partially opened stop-cock, we have: $v_1 s_1 = v_2 s_2$ in which V is the velocity in B , S the area of cross-section of B , and S the area of the opening in the diaphragm. Third.--When the flow is from one pipe to another of larger in which $V =$ velocity in small pipe, and $V =$ velocity in larger one. When the water passes from a pipe into a reservoir, as in the case lately considered, V becomes zero, and we have, as already established in that case: $r = \frac{v^2}{2g}$ to Another loss of head is that due to branches (Fig. 14). In Fig. 14. this case the water flowing from A , with a velocity V , is split at the junction, part passing on toward B , with a reduced velocity V , and part entering the branch and flowing toward C , with the velocity V . The loss of head occasioned by perturbations of the water at the junction has not been satisfactorily investigated. When the branch leaves the main at a right angle, this loss, as determined by a few incomplete experiments, is: $3 \frac{v^3}{2g} = V$ being the velocity in the branch. We have...
